

IN THE DRAWINGS

Please delete the replacement Chart #2 submitted in connection with the response of October 12, 2005 and reinstate the originally submitted Chart #2 in Appendix "A" as previously submitted.

Please remove and delete the sheet in the appendix which contains pictures of the different shaft extensions and add new Figure 5 as submitted herewith which contains those pictures.

REMARKS

Reexamination of this application is respectfully requested.

The examiner has objected to the specification under rule 1.71 Title 37 CFR for not being written in full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same. Applicants have submitted the above matter for inclusion in the specification to clarify the fitting process in coordination with the examiner's suggestions and therefore believe that the specification now clearly discloses the invention by providing a step-by-step discussion of the process and the use of charts 1A-1C. Also, no new matter has been presented as all of the offending material has been removed as per the examiner's request. It is believed that the submitted specification modifications overcome the objections of the examiner and clarify the selecting and fitting process, a process which is further believed to present a significant improvement over those fitting systems found in the prior art.

Regarding the sheet in the appendix which contains pictures of the different shaft extensions, the applicants have removed it from the appendix and placed it with the drawings with a figure number and a brief description, and therefore this informality is believed to have been corrected.

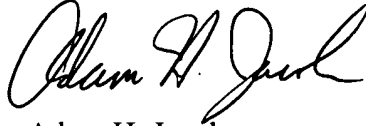

The examiner has rejected claims 1-6, 8-10 and 13-14 under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. Applicants have amended the objectionable claims to resolve the cited deficiencies and clarify the scope of the claims, and has canceled claim 4 per the examiner's suggestion. Applicants thus believe the presently submitted claims to be acceptable. Applicants particularly note that the examiner had previously stated that none of the prior art discloses computing a Balance Index as claimed, and therefore each of the claims remaining in the application is believed to be allowable over the prior art.

It is thus believed that this invention is deserving of protection, and the granting of such protection is respectfully requested. Applicants note that the action was made final by the examiner, but it is believed that the present amendments place the application in condition for allowance of all claims remaining herein, and therefore should be acceptable as an Amendment After Final Action.

Applicant is mailing this amendment after expiration of the three month response period but

1 within the first month's extension of time permitted by 37 C.F.R. § 1.136 and accompanied by the
2 fee set forth in 37 C.F.R. § 1.17(a). This application is thus believed to be in condition for allowance
3 of all claims remaining herein, and such action is respectfully requested.

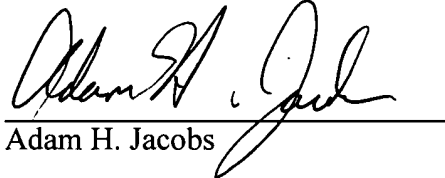

4 Respectfully submitted,

5
